Assignment on CSS

1. Create an external CSS file and link it to an HTML page. Use the CSS file to style the background color, font size, and text color of the page elements.

2. Build a three-column layout using HTML and CSS, where each column contains different types of content (text, images, etc.).

3. Implement a simple image gallery using HTML and CSS. The gallery should display thumbnails of images and clicking on a thumbnail should display the full-sized image in a lightbox overlay.

4. Design a registration form using HTML and CSS and validate the form using HTML5 form validation attributes.

5. Design the following web page using CSS box model. You can use any image instead of **Fox image**
